

## PDSA Implementation Process

1. **Select** the problem to analyze
2. **Clearly define** the problem and write a problem statement
3. **Set** a measurable goal for the problem solving effort
4. **Identify** other processes that impact the problem
5. **List** the current process steps, validate and map
6. **Identify** potential cause
7. **Collect** and analyze existing data
8. **Identify** root cause

1. **Establish** the criteria for selecting a solution
2. **Generate** potential solutions that will address root cause
3. **Select** a solution  
Gain approval  
Plan for solution and implement

1. **Gather** the appropriate data on the solution, document, analyze.
2. **Achieve** desired result? Move to ACT
3. **Did not Achieve** desired result? Back to PLAN

1. **Identify** systemic changes and training needs for full implementation
2. **Adopt** the solution and communicate it!
3. **Plan** for on-going monitoring and continue to look for incremental improvements
4. **Plan** the next PDSA for the process!
